Zephyr

Color Concept

The newly developed 11 colors of mesh and fabric are categorized in three series:

Organic, Elegant, and Basic. The Organic colors can give a light atmosphere to bring a more fresh and active image into the office, in the meantime, the Elegant colors can produce a relaxed work scenes not with a heavy impression. And the Basic colors make offices into the calmness and the formality.

Chairs That Support the Natural Movement of the Body.

Okamura office seating was designed to easily respond to a wide variety of work postures.

One example of this is the Ankle Tilt® reclining function,

where the chair's pivot point is at the occupant's ankle,

allowing for the back and seat of the chair to slide in synch.

This function supports a natural posture; even when the occupant reclines,

there is no strain on the upper legs. In addition, you can adjust the reclining angle

and seat position while remaining seated in the chair.

lowered 100 mm with a lever on

the lower right side of the seat.

Seat Slide Adjustment where the hands fall naturally

Adjustability

Ankle Tilt® Reclining Ankle Tilt® Reclining allows for the body's natural way of moving. With a lever on lower left-hand side of the seat, sitters can adjust the reclining angle however they choose. The range of recline can be adjusted smoothly.

Arm Rest Height Adjustment The chair's armrests can be adjusted while seated with just a gentle pull upwards to a height of 100 mm in 20 mm increments.

Arm Pad Angle Adjustment The arm pads can be adjusted to an inward angle of 60° and an outward angle of 30°. They gently support the entire forearm when

using the computer and performing other tasks.
